

Pradeep Jawahar

+917708993399 | andrewpradeep13@gmail.com | Bangalore, Karnataka

Summary

Senior Engineer with 8+ years of experience architecting scalable web applications, combining a deep frontend foundation with strong full-stack and backend execution. Adept at bridging client-server architectures by designing robust REST APIs, event-driven webhooks, and scalable process automations. Proven technical leader skilled in mentoring junior engineers, managing cross-functional teams, and driving complex, end-to-end projects to on-time delivery.

Experience

Findem | Bangalore

Senior Software Engineer | 04/2024 - Present

- **Engineered end-to-end logic** for core Applicant Tracking System (ATS) features and onboarding workflows, streamlining candidate progression and data accuracy.
- **Engineered an MCP-based agentic workflow** to securely expose internal applicant tracking data to LLMs, optimizing the candidate screening and shortlisting pipeline.
- **Integrated custom debugging** instructions into local Claude markdown skills, enabling rapid automated analysis of product flows.
- **Architected and deployed a robust asynchronous operations framework** featuring real-time progress visualization, automated error tracking, and a dynamic retry mechanism; successfully eliminated a major category of customer support tickets caused by stale UI states.
- **Spearheaded the technical integration of a newly acquired SaaS product** by designing high-throughput webhooks and automation pipelines, directly driving a **15% increase in upsell revenue**.

Zomentum

Software Developer | 08/2021 - 03/2024

- **Engineered and enhanced a web-based quoting and proposal management module**, streamlining complex document workflows and delivering an intuitive, high-performance user interface.
- **Optimized PDF generation latency by 66%**, slashing rendering times from 3 seconds to **under 1 second** while dynamically formatting customized headers, footers, and complex page numbering schemas.
- **Reduced digital signature process failures by 33%** and significantly elevated customer satisfaction metrics by replacing unreliable internal signature logic with a stable third-party solution.

Zoho(SalesIQ)

Frontend Developer | 05/2018 - 07/2021

- **Led and mentored a team of 3 junior engineers** to design, build, and maintain enterprise communication features, including secure file sharing, audio calling, message threads, and dynamic chat invitations.
- **Architected a real-time communication engine** utilizing WebSockets and a PubSub pattern to support live chat updates and asynchronously handle dynamically imported modular listeners.
- **Engineered a client-side logging and caching system** using IndexedDB with automated data expiry, **reducing API traffic by 90% (10x)** while drastically improving application responsiveness.
- **Spearheaded application build optimizations** via Webpack chunk splitting and tree shaking, slashing initial page load latency by **over 60%** to bring render times from 5 seconds down to **under 2 seconds**.

Skills

React, JavaScript, Typescript, Node.js, NextJS, Jest, Speckit, MongoDB, Vite, Webpack, Microfrontend, AWS, Claude Skills, MCP

Projects

[CreamBoard](#) - Project similar to that of a whiteboard in Miro with limited functionality containing shapes, lines and drag options using the canvas API. This was done without help of AI
